## How to Reach Us

### Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are available in print or electronic format. Maps and other geographic reference materials are available for some types of data. In some cases, workshops and seminars have been developed to provide additional information on some subjects.

### How to Obtain More Information

Inquiries about products and services should be directed to one of the following Statistics Canada Reference Centres:

St. John's	(709) 772-4073	Winnipeg	(204) 983-4020
Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691

A toll-free number is provided in all provinces and territories, for users who reside outside the local dialing area of any of the Regional Reference Centres. See the "Regional Reference Centres" section at the end of this product for further information.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-263-1136
Manitoba	1-800-542-3404
Saskatchewan	1-800-667-7164
Alberta	1-800-282-3907
Southern Alberta	1-800-472-9708
British Columbia (South and Central)	1-800-663-1551

Yukon and Northern B.C. (area served by Northwest Tel Inc.)	Zenith 08913
Northwest Territories (area served by Northwest Tel Inc.)	Call collect 403-495-3028

Telecommunications Device access is provided for the hearing impaired. See the "Regional Reference Centres" section at the end of this product for further information.

### How to Order Products

Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the nearest Statistics Canada Regional Reference Centre, or by mail order to Publication Sales, Statistics Canada, Ottawa K1A 0T6. Contact the nearest Statistics Canada Regional Reference Centre for more information on electronic products and services. See the order form at the end of this product for further details.

## Pour nous joindre

### Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations normalisées et spéciales sont disponibles sur support papier ou électronique. Des cartes et d'autres documents géographiques de référence sont disponibles pour certains genres de données. Dans certains cas, des ateliers et des séminaires procurent des renseignements complémentaires sur certains sujets.

### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet des produits et services doivent être adressées à l'un des centres de consultation de Statistique Canada suivants:

St. John's	(709) 772-4073	Winnipeg	(204) 983-4020
Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691

Un numéro d'appel sans frais est offert, dans toutes les provinces et territoires, aux utilisateurs qui habitent à l'extérieur du secteur de service local des centres régionaux de consultation. Pour de plus amples renseignements, reportez-vous à la section «Centres régionaux de consultation» à la fin du présent produit.

## Note of Appreciation

*Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

---

## Note de reconnaissance

*Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.*

## Preface

In 1666, Jean Talon organized the first census of the territory which, 200 years later, would become Canada. At that time, the census consisted of enumerating people living in the colony, and collecting information on their age, sex, marital status, and occupation. Today, the census has become the main source of information on Canadians and their way of life.

The census of Canada leads to the creation of many products. These include the Population and Dwelling Counts series, which contains nine publications and one electronic product. This series is designed in such a way as to present the distribution of the Canadian population in accordance with various geographic areas, as well as the number of dwellings in each of these areas.

This particular publication deals with counts from the 1991 Census for the country as a whole. It provides population and dwelling counts, as well as the percentage change in the population between 1986 and 1991, and the population density for census divisions and subdivisions.

The population counts derived from the census of Canada are established in accordance with the enumeration method known as "de jure". This method consists of enumerating people in their usual place of residence, regardless of where they are on the day of the census. Furthermore, the population counts in this series are based on the enumeration of the population as a whole and are not rounded.

Ivan P. Fellegi  
Chief Statistician of Canada

## Préface

En 1666, Jean Talon organisait le premier recensement du territoire qui allait devenir, quelque 200 ans plus tard, le Canada. Le recensement consistait alors à dénombrer les personnes qui habitaient la colonie et à recueillir des renseignements sur leur âge, leur sexe, leur état matrimonial et leur profession. De nos jours, le recensement est devenu la principale source d'information sur les Canadiens et leur mode de vie.

Le recensement du Canada donne lieu à la parution de nombreux produits. Parmi ceux-ci figure la série Chiffres de population et des logements qui compte neuf publications ainsi qu'un produit électronique. Cette série est conçue de manière à présenter la répartition de la population canadienne selon différentes régions géographiques, de même que le nombre de logements pour chacune de ces régions.

La présente publication traite des chiffres du recensement de 1991 pour l'ensemble du pays. Elle donne les chiffres de population et des logements, la variation en pourcentage de la population entre 1986 et 1991 et la densité de la population pour les divisions et les subdivisions de recensement.

Les chiffres de population du recensement du Canada sont établis selon une méthode de dénombrement appelée de jure. Cette méthode consiste à dénombrer les personnes à leur domicile habituel, peu importe l'endroit où elles se trouvent le jour du recensement. Par ailleurs, les chiffres de population présentés dans cette série sont basés sur le dénombrement de l'ensemble de la population et ne sont pas arrondis.

Le statisticien en chef du Canada  
Ivan P. Fellegi

## Carte de référence – Divisions de recensement, 1991

## Highlights

- Canada's population, as enumerated in the 1991 Census, was 27,296,859, nearly 2 million (7.9%) more than in 1986.
- Among the provinces, the largest population increases occurred in British Columbia (13.8%), Ontario (10.8%) and Alberta (7.6%).
- Smaller increases occurred in Quebec (5.6%), Nova Scotia (3.1%), Manitoba (2.7%), Prince Edward Island (2.5%), and New Brunswick (2.0%), while Newfoundland's population remained almost the same and Saskatchewan's declined by 2.0%.
- In the territories, the population increased by 18.3% in Yukon Territory (to 27,797) and by 10.4% in the Northwest Territories (to 57,649).
- On June 4, 1991, Canada had a population density of 3.0 persons per square kilometre.
- Of the five most populous municipalities in 1991, Toronto had the highest population density (6,540 persons per km<sup>2</sup>), followed by Montréal (5,741 persons per km<sup>2</sup>), Winnipeg (1,079 persons per km<sup>2</sup>), Calgary (1,019 persons per km<sup>2</sup>), and Edmonton (920 persons per km<sup>2</sup>).
- Among municipalities with a population of more than 25,000 in 1991, the greatest population growth between 1986 and 1991 occurred in five Ontario communities: Richmond Hill (71.4%), Vaughan (71.2%), Ajax (56.9%), Cumberland (50.7%) and Newcastle (45.2%).
- The largest population declines in municipalities with a population of over 25,000 in 1991 occurred in Sydney, Nova Scotia (–6.1%), Montréal–Nord, Quebec (–5.3%), and Moose Jaw, Saskatchewan (–4.2%).
- Among smaller municipalities (1991 population between 5,000 and 25,000) the most rapid population growth occurred in four Quebec communities — Saint-Lazare (78.9%), La Plaine (76.4%), Le Gardeur (49.7%) and Lachenaie (48.1%).

## Faits saillants

- La population du Canada dénombrée lors du recensement de 1991 était de 27 296 859 personnes, c'est-à-dire près de deux millions de plus (7,9 %) qu'en 1986.
- On observait les plus fortes augmentations de la population en Colombie-Britannique (13,8 %), en Ontario (10,8 %) et en Alberta (7,6 %).
- De plus petites augmentations ont été observées au Québec (5,6 %), en Nouvelle-Écosse (3,1 %), au Manitoba (2,7 %), à l'Île-du-Prince-Édouard (2,5 %) et au Nouveau-Brunswick (2,0 %); par ailleurs, la population de Terre-Neuve est demeurée sensiblement la même, tandis que la population de la Saskatchewan a diminué de 2 %.
- La population du Territoire du Yukon s'est accrue de 18,3 %, pour atteindre 27 797 personnes, et la population des Territoires du Nord-Ouest s'est accrue de 10,4 %, pour atteindre 57 649 personnes.
- Le 4 juin 1991, la densité de la population au Canada était de 3,0 personnes au kilomètre carré.
- Des cinq municipalités les plus peuplées en 1991, Toronto connaissait la plus forte densité de population (6 540 personnes au km<sup>2</sup>); elle était suivie de Montréal (5 741 personnes au km<sup>2</sup>), Winnipeg (1 079 personnes au km<sup>2</sup>), Calgary (1 019 personnes au km<sup>2</sup>) et Edmonton (920 personnes au km<sup>2</sup>).
- Parmi les municipalités qui avaient une population de plus de 25 000 habitants en 1991, on observait les plus fortes croissances de population, de 1986 à 1991, à Richmond Hill (71,4 %), Vaughan (71,2 %), Ajax (56,9 %), Cumberland (50,7 %) et Newcastle (45,2 %), toutes cinq situées en Ontario.
- Des municipalités de 25 000 habitants ou plus en 1991, on observait les plus fortes diminutions de population à Sydney, Nouvelle-Écosse (–6,1 %), Montréal–Nord, Québec (–5,3 %) et Moose Jaw, Saskatchewan (–4,2 %).
- Parmi les municipalités qui avaient une population de 5 000 à 25 000 habitants en 1991, on observait la croissance démographique la plus rapide à Saint-Lazare (78,9 %), La Plaine (76,4 %), Le Gardeur (49,7 %) et Lachenaie (48,1 %), que l'on retrouve toutes quatre au Québec.

## Introduction

This publication provides population and dwelling counts established by the 1991 Census of Canada. It shows population and dwelling counts for census divisions and census subdivisions. The geographic boundaries of these areas are those that were in force on January 1, 1991 (geographic reference date for the 1991 Census of Canada).

Users of this publication may be interested in consulting the reference maps showing the name, boundaries, and location of census divisions and subdivisions (Catalogue No. 92–319).

## Organization of the Publication

The tables in this publication show 1986 and 1991 population counts for census divisions and subdivisions. This section ends with an alphabetical index of census subdivisions.

Other reference data, such as a detailed definition of terms, and some explanations regarding the quality of the data, can be found at the end of the publication, immediately after the tables.

## Table Descriptions

**Table 1** contains the 1991 population counts for census divisions by province and territory. The table also contains the 1986 population counts, the percentage change in the population between 1986 and 1991, the number of dwellings in 1991, the land area, the population density, and the population ranking of the area at both the national and provincial levels.

**Table 2** is similar to Table 1, except that it deals with census subdivisions. These are grouped in alphabetical order within their respective census divisions.

**Table 3** contains an alphabetical index of the census subdivisions in Canada. It also includes the province, the census division, and, if applicable, the census metropolitan area and urban area where the census subdivision is located. A footnote referring to the corresponding page of Table 2 facilitates consultation.

## Introduction

Cette publication donne les chiffres de population et des logements établis par le recensement du Canada de 1991. Elle présente les chiffres de population et des logements pour les divisions de recensement et les subdivisions de recensement. Les limites géographiques de ces régions sont celles qui étaient en vigueur le 1er janvier 1991 (date de référence géographique pour le recensement du Canada de 1991).

Les utilisateurs de la publication pourraient être intéressés à consulter les cartes de référence indiquant le nom, les limites et la localisation des divisions et des subdivisions de recensement (no 92–319 au catalogue).

## Structure de la publication

Les tableaux de la présente publication donnent les chiffres de population de 1986 et de 1991 pour les divisions et les subdivisions de recensement. Un index alphabétique des subdivisions de recensement complète la section.

Vous trouverez d'autres données de référence, comme la définition détaillée des termes et certaines précisions sur la qualité des données, à la fin de la publication, immédiatement après les tableaux.

## Description des tableaux

**Le tableau 1** indique les chiffres de population de 1991 pour les divisions de recensement, selon les provinces et les territoires. Le tableau renferme aussi les chiffres de population de 1986, la variation en pourcentage de la population entre 1986 et 1991, le nombre de logements en 1991, la superficie des régions, la densité de la population et le rang de la région, selon la population, aux niveaux national et provincial.

**Le tableau 2** est semblable au tableau 1 à la différence qu'il porte sur les subdivisions de recensement. Celles-ci sont regroupées, par ordre alphabétique, sous leur division de recensement respective.

**Le tableau 3** constitue un index alphabétique des subdivisions de recensement du Canada. On y retrouve aussi la province, la division de recensement et, s'il y a lieu, la région métropolitaine de recensement et la région urbaine dans lesquelles se trouve la subdivision de recensement. Un renvoi à la page correspondante du tableau 2 facilite la consultation.

## Content Considerations

It often happens that the names, boundaries, or other characteristics of geographic areas change (census subdivisions may amalgamate, or there may be an annexation, or change of name or status). Since the geographic framework is used for the census data collection, the geographic reference date must be set several months before the date of the census in order to have these changes made within the time limit. For the 1991 Census, the geographic reference date was January 1, 1991.

Users wishing to compare 1991 Census data with those of other censuses should then take into account the fact that the boundaries of geographical units may change from one census to another. In order to facilitate comparison, the 1986 Census population counts were included in this publication and were adjusted as needed to take into account boundary changes between the 1986 and 1991 Censuses. The 1986 population counts that were adjusted are identified by the letter "A".

A detailed description of intercensal changes made to the geographical units can be found in the publication entitled *Standard Geographical Classification, 1991, Volume III* (Catalogue No. 12-573).

Some Indian settlements and reserves were incompletely enumerated during the 1986 and/or 1991 Censuses (see "Special Notes"). These reserves and settlements are identified wherever they appear in the publication.

As well, in 1986, estimates for the population of incompletely enumerated Indian reserves and settlements were produced. Although these estimates were not included in the official counts published in the 1986 *Population and Dwelling Counts* series, they appeared in an appendix at the provincial/territorial and at the national level. They were also included in the 1986 *Canada's Population from Ocean to Ocean* publication as well as in the issue of the Statistics Canada *Daily* publicizing the release of population and dwelling counts from the 1986 Census. Users should therefore be aware that the 1986 population counts shown in this publication (as well as calculations such as percentage change) will differ, at the provincial/territorial and national levels, from those shown in the above publications.

The dwelling counts in this publication refer to all private dwellings in Canada occupied by their usual residents, as well as temporary or foreign residents. The population counts correspond to people having their usual residence in Canada, plus Canadians living in other countries, but do not include

## Considérations relatives au contenu

Il arrive souvent que les noms, les limites ou d'autres caractéristiques des régions géographiques changent (fusions de subdivisions de recensement, annexions, changements de nom ou de statut). Étant donné que le cadre géographique est utilisé aux fins de la collecte des données du recensement, la date de référence géographique doit être fixée plusieurs mois avant la date du recensement pour que tous les changements soient intégrés avant la date limite. Pour le recensement de 1991, la date de référence géographique était le 1er janvier 1991.

L'utilisateur qui désire comparer des données du recensement de 1991 avec des données d'autres recensements doit donc tenir compte du fait que les limites des unités géographiques peuvent changer d'un recensement à l'autre. Pour faciliter la comparaison, les chiffres de population du recensement de 1986 ont été inclus dans cette publication et ont été ajustés, au besoin, pour tenir compte des changements de limites entre le recensement de 1986 et celui de 1991. Les chiffres de population de 1986 qui ont été ajustés sont marqués de la lettre «A».

Une description détaillée des changements intercensitaires apportés aux unités géographiques se trouve dans la publication intitulée *Classification géographique type, 1991, volume III* (n° 12-573 au catalogue).

Certains établissements indiens et réserves indiennes n'ont été que partiellement dénombrés lors des recensements de 1986 et/ou de 1991 (voir «Notes spéciales»). Ces réserves et ces établissements sont indiqués partout où ils figurent dans la publication.

De plus, en 1986, des estimations de la population des établissements indiens et des réserves indiennes partiellement dénombrés ont été effectuées. Même si ces estimations n'ont pas été incluses dans les chiffres officiels publiés dans la série de *Chiffres de population et des logements* de 1986, elles étaient indiquées dans une annexe aux niveaux provincial, territorial et national. Elles ont aussi été incluses dans la publication intitulée *La population canadienne - D'un océan à l'autre* de 1986 ainsi que dans *Le Quotidien* de Statistique Canada qui annonce la diffusion des chiffres de population et des logements du recensement de 1986. Par conséquent, les utilisateurs devraient savoir que les chiffres de population de 1986 indiqués dans la présente publication (ainsi que les calculs relatifs, par exemple, au pourcentage de variation) sont différents, aux niveaux provincial, territorial et national, de ceux indiqués dans les publications mentionnées ci-dessus.

Les chiffres des logements publiés dans la présente publication se rapportent à tous les logements privés au Canada occupés par leurs résidents habituels ainsi que par des résidents temporaires ou étrangers. Les chiffres de population correspondent aux gens qui ont leur résidence habituelle au Canada et aux Canadiens vivant à l'étranger,

foreign residents living in Canada (“foreign residents” do not include “non-permanent residents” – see “Special Notes”). Given these differences, users will be well advised not to interpret population counts as being the number of people living in the reported dwellings.

All land area measurements apply to the boundaries in force on January 1, 1991. The map scales used to measure land area vary greatly, and as much as possible, the land areas measured using a digital planimeter do not take into account large bodies of water. Non-official measurements of area provided by the census of Canada are used only to calculate data on population density. Official measurements of the land area of Canada, the provinces and the territories are established by the Surveys, Mapping and Remote Sensing Sector of the Department of Energy, Mines and Resources Canada.

## Symbols

The following standard symbols may be found in Census products.

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- Amount too small to be expressed.
- XXX Figures suppressed to protect confidentiality.
- \*\* The median could not be calculated as it occurred in an open-ended class.
- \* Land area is included in neighbouring census subdivision.
- An error exists in the 1991 counts for this census subdivision (CSD). For further information, see the “Special Notes” section.
- A Adjusted figure due to boundary change.
- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the “Special Notes” section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the “Special Notes” section.

mais ils ne comprennent pas les résidents étrangers vivant au Canada («résident étranger» ne comprend pas «résident non permanent»; voir «Notes spéciales»). Étant donné ces différences, on déconseille aux utilisateurs d'interpréter les chiffres de population comme étant le nombre de personnes vivant dans les logements déclarés.

Toutes les mesures de superficie s'appliquent aux limites en vigueur le 1<sup>er</sup> janvier 1991. Les échelles des cartes utilisées pour mesurer la superficie varient beaucoup. En outre, les surfaces, qui sont mesurées à l'aide d'un planimètre digital, ne tiennent pas compte dans la mesure du possible des grandes étendues d'eau. Les mesures non officielles de la superficie que fournit le recensement du Canada ne servent qu'à calculer les données sur la densité de la population. Les mesures officielles de la superficie du Canada, des provinces et des territoires sont établies par le Secteur des levés, de la cartographie et de la télédétection d'Énergie, Mines et Ressources Canada.

## Signes conventionnels

Les signes conventionnels suivants peuvent être retrouvés dans les produits du recensement.

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- Nombres infimes.
- XXX Nombres supprimés afin de protéger la confidentialité.
- \*\* Il est impossible de calculer la médiane car elle se trouve dans une des classes ouvertes de répartition utilisée pour calculer la médiane.
- \* La superficie est comprise dans la subdivision de recensement avoisinante.
- Une erreur a été relevée dans les chiffres de 1991 pour cette subdivision de recensement (SDR). Pour plus de renseignements, voir la section «Notes spéciales».
- A Chiffre ajusté à cause de changement de limite.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».

Please note, the following text should have been included in the "Content Considerations" section.

Veuillez noter que le texte qui suit aurait dû se retrouver à la section «Considérations relatives au contenu».

In 1990, Statistics Canada and the province of Quebec agreed to recognize the "municipalités régionales de comté" (MRC) as census divisions (CD)—see Definitions—for the 1991 Census. These are the geographical areas currently responsible for regional administration in Quebec. As a result, all CDs in the province experienced some degree of boundary change affecting population counts.

En 1990, Statistique Canada et le Québec ont convenu de reconnaître les «municipalités régionales de comté» (MRC) comme divisions de recensement (DR) — voir Définitions — pour le recensement de 1991. C'est à ces régions géographiques qu'incombe actuellement la responsabilité de l'administration régionale au Québec. En conséquence, des changements plus ou moins importants ont été apportés aux limites de toutes les DR de la province, ce qui a eu des répercussions sur les chiffres de population.

Ordinarily, such a change would be indicated by putting an "A" (for "adjusted") beside the 1986 count; this would have resulted in all Quebec CDs showing an "A". However, further changes affecting two CDs were received from the province after the restructuring. In order to give users as much information as possible, an "A" relating to a 1986 CD count for Quebec is used to indicate only this latter type of change.

Normalement, un «A» (pour «ajustés») apparaît à côté des chiffres de 1986 pour indiquer ce genre de changements. Si cette règle avait été suivie, toutes les DR du Québec auraient été marquées d'un «A». Toutefois, d'autres changements touchant deux DR ont été communiqués par la province après la restructuration. Pour renseigner au mieux les utilisateurs, il a été décidé d'utiliser le «A» après des chiffres de 1986 pour les DR du Québec uniquement pour les changements de la seconde catégorie.

## Definitions

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the **1991 Census Dictionary** (Catalogue No. 92-304E) for the full definitions and additional remarks related to these concepts and definitions.

### Census Division (CD)

Refers to the general term applying to geographic areas established by provincial law, which are intermediate geographic areas between the census subdivision and the province (e.g., divisions, counties, regional districts, regional municipalities and seven other types of geographic areas made up of groups of census subdivisions).

In Newfoundland, Manitoba, Saskatchewan and Alberta, provincial law does not provide for these administrative geographic areas. Therefore, census divisions have been created by Statistics Canada in co-operation with these provinces.

### Census Metropolitan Area (CMA)

The general concept of a census metropolitan area (CMA) is one of a very large urban area, together with adjacent urban and rural areas which have a high degree of economic and social integration with that urban area.

A CMA is delineated around an urban area (called the urbanized core and having a population of at least 100,000, based on the previous census). Once an area becomes a CMA, it is retained in the program even if its population subsequently declines.

Smaller urban areas, centred on urbanized cores of a population of at least 10,000, are included in the census agglomeration (CA) program.

### Census Subdivision (CSD)

Refers to the general term applying to municipalities (as determined by provincial legislation) or their equivalent, e.g., Indian reserves, Indian settlements and unorganized territories.

In Newfoundland, Nova Scotia and British Columbia, the term also describes geographic areas that have been created by Statistics Canada in co-operation with the provinces as equivalents for municipalities.

### Census Subdivision Type

The type indicates the municipal status of a census subdivision. Census subdivisions (CSDs) are classified into various types, according to official designations adopted by provincial or federal authorities.

The following list indicates the abbreviations used for CSD types:

BOR	Borough
C	City - Cité
CM	County (municipality)
COM	Community

CT	Canton (municipalité de)
CU	Cantons unis (municipalité de)
DM	District municipality
HAM	Hamlet
ID	Improvement district
IGD	Indian government district
LGD	Local government district
LOT	Township and royalty
MD	Municipal district
NH	Northern hamlet
NV	Northern village
P	Paroisse (municipalité de)
PAR	Parish
R	Indian reserve - Réserve indienne
RM	Rural municipality
RV	Resort village
SA	Special area
SCM	Subdivision of county municipality
SD	Sans désignation (municipalité)
S-E	Indian settlement - Établissement indien
SET	Settlement
SRD	Subdivision of regional district
SUN	Subdivision of unorganized
SV	Summer village
T	Town
TP	Township
TR	Terres réservées
UNO	Unorganized - Non organisé
V	Ville
VC	Village cri
VK	Village naskapi
VL	Village
VN	Village nordique

### Geographic Area

Refers to geographic areas delineated or employed for the collection, compilation, analysis and dissemination of census data.

### Indian Reserve

Refers to land, the legal title to which is vested in Her Majesty, that has been set apart for the use and benefit of an Indian band and that is subject to the terms of the Indian Act. Since it is generally excluded from local jurisdiction and is administered by the Federal Department of Indian and Northern Affairs Canada (INAC), it is classified as a census subdivision (CSD) by Statistics Canada.

### Indian Settlement

Refers to places, identified by the Federal Department of Indian and Northern Affairs Canada (INAC) for statistical purposes only,

where a self-contained group of at least 10 Indian people reside more or less permanently. Indian settlements are usually located on Crown lands under federal or provincial jurisdiction. They have not been set apart for the use and benefit of an Indian band as is the case with Indian reserves.

## Land Area

### Gross

Refers to area measurement in square kilometres, including bodies of water.

All land area measurements of geographical units apply to the limits in effect on January 1, 1991, the geographic reference date for the 1991 Census of Canada.

The map scales used to measure land area generally vary between 1:50,000 and 1:250,000. In densely populated urban areas and in sparsely populated areas, larger or smaller scales are sometimes used.

### Net

Refers to land area measurement in square kilometres and excludes discernible bodies of water as found on the maps used to calculate land area.

All land area measurements apply to the limits in effect on January 1, 1991, the geographic reference date for the 1991 Census of Canada.

The map scales used to measure land area generally vary between 1:50,000 and 1:250,000. In densely populated urban areas and in sparsely populated areas, larger or smaller scales are sometimes used.

## Population Density

Refers to the number of persons per square kilometre of net land area.

## Private Dwelling

Refers to a separate set of living quarters with a private entrance either from outside or from a common hall, lobby, vestibule or stairway inside the building. The entrance to the dwelling must be one which can be used without passing through the living quarters of someone else. The dwelling must meet the three conditions necessary for year-round use:

- (i) a source of heat or power (as evidenced by chimneys, power lines, oil or gas pipes or meters, generators, woodpiles, electric lights, solar heating panels, etc.);
- (ii) access to a source of drinking water throughout the year (as evidenced by faucets, drain pipes, wells, water pumps, etc.);
- (iii) an enclosed space that provides shelter from the elements (as evidenced by complete and enclosed walls, by a roof and by doors and windows that provide protection from wind, rain and snow).

The census classifies private dwellings into regular private dwellings, marginal dwellings and dwellings under construction. Regular private dwellings are further classified into three major groups: occupied dwellings (occupied by usual residents), unoccupied dwellings and dwellings occupied by foreign and/or temporary residents. Marginal dwellings and dwellings under construction are classified as occupied by usual residents or by foreign and/or temporary residents. Marginal dwellings and dwellings under construction that were unoccupied on Census Day are not counted in the housing stock.

## Province

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified.

## Territory

Refers to two major political divisions of Canada, namely Yukon and Northwest Territories. From a statistical point of view, these territories are equivalent to provinces, i.e. a basic unit for which data are tabulated and cross-classified.

## Urban Area (UA)

The general concept of an urban area (UA) is that of an area containing a dense concentration of population.

Statistics Canada defines an urban area as an area which has attained a population concentration of at least 1,000, and a population density of at least 400 per square kilometre, at the previous census. All territory lying outside urban areas is considered rural. Taken together, urban and rural areas cover all of Canada.

Urban areas separated by gaps of less than two kilometres are combined to form a single urban area.

## Data Quality

### General

The 1991 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how

large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- **coverage errors**, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- **non-response errors**, which result when responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reasons;
- **response errors**, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- **processing errors**, which can occur at various steps including: **coding**, when "write-in" responses are transformed into numerical codes by clerks; **data capture**, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and **imputation** when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- **sampling errors**, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

## Coverage Errors

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in **undercoverage**. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be

missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not in the census population universe, such as a foreign resident or a fictitious person, may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1991, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant was revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households and persons missed because their dwelling was incorrectly classified as vacant. Second, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province and territory, the magnitude of this residual undercoverage in the 1991 Census is being measured by means of a special study known as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. The fourth study, known as the Overcoverage Study, is designed to investigate overcoverage errors. The results of the Reverse Record Check and the Overcoverage Study, when taken together, furnish an estimate of net undercoverage.

## Other Non-Sampling Errors

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensure as complete a response as possible. Census representatives edit the questionnaires and follow up any missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses is still missing. Although missing entries are eliminated during processing by replacing a missing value by the corresponding entry for a "similar" record, there remain some

potential **non-response errors**. This is particularly serious if the non-respondents differ in some respects from the respondents, since this procedure will result in non-response bias.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as **response errors**. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire, such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a written response. During processing, these “write-in” entries are given a numeric code. **Coding errors** can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a sample of each coder’s work and taking corrective action where necessary. For the first time in 1991, much of the coding was automated, partly in an effort to reduce the extent of coding errors.

After the coding and certain other manual processing steps are complete, the information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of **data capture errors**. First, certain edits (such as range checks) are performed as the data are keyed. Second, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on the record. In most cases, however, this is not possible and a valid response is obtained from a “donor” record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records, any **imputation errors** will more or less cancel out when results are tabulated for a sufficiently large geographic area or population subgroup.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1991 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1991 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as

birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain “stable” characteristics (such as age, sex, mother tongue, place of birth), the responses obtained in the 1991 Census, for a sample of individuals, are being compared with those for the same individuals in the 1986 Census. Also, following the 1991 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time, however, interviewers asked a series of detailed questions on language, ethnic origin and marital status; the responses will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

## Special Notes

### Population Counts Based on Usual Residence

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered “non-permanent residents” (see note on this group). In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

### Incompletely Enumerated Indian Reserves and Indian Settlements

On some Indian reserves and Indian settlements (a total of 78) in the 1991 Census, enumeration was not permitted, or was interrupted before it could be completed, or the quality of the collected data was considered inadequate. These geographic areas are called incompletely enumerated Indian reserves and Indian settlements.

Data for 1991 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves and settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for the affected geographic areas, comparisons (e.g., percentage change) between 1986 and 1991 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can be significant for smaller areas, where the affected reserves and settlements account for a higher proportion of the population.

A list of the Indian reserves and settlements along with Population and Occupied Private Dwellings Counts from the last two censuses (where available) has been compiled and is shown in Appendix 1.

A list of incompletely enumerated Indian reserves and Indian settlements is shown in Appendix 2 together with the province, census division and, where applicable, the census metropolitan area or census agglomeration (CMA/CA) in which each is located.

## Non-permanent Residents

In 1991, for the first time, the census of population included both permanent and non-permanent residents of Canada. Non-permanent residents are persons who hold student or employment authorizations, Minister's permits or who are refugee claimants.

Prior to 1991, only permanent residents of Canada were included in the census. (The only exception to this was 1941.) Non-permanent residents were considered foreign residents and were not enumerated.

Today in Canada, non-permanent residents make up a growing segment of the population. Their presence can affect the demand for such government services as health care, schooling, employment programs and language training. The inclusion of non-permanent residents in the 1991 Census will also facilitate comparisons with provincial and territorial statistics (marriages, divorces, births and deaths) which include this population. In addition, the census definition is now closer to the UN recommendation that long-term residents (persons living in a country for one year or longer) be enumerated.

Total population counts, as well as counts for all variables collected on a 100% basis, e.g., age, sex, mother tongue and marital status, will be affected by the change in the 1991 Census universe. Until immigration data are released, it will not be possible to know the extent to which differences in the counts are due to the inclusion of non-permanent residents or other factors. Users should be especially careful when comparing data from 1991 and previous censuses in geographic areas where there is a concentration of non-permanent residents. These include the major metropolitan areas in Ontario, Quebec and British Columbia.

Although every attempt has been made to enumerate non-permanent residents, factors such as language difficulty and the reluctance to complete a government form or understand the need to participate may affect the enumeration of this population. Non-permanent residents can only be identified through the long questionnaire completed by 20 per cent of Canadian households. An estimate of the size of this population group will not be known until the release of census data on immigration in December 1992.

## Census Subdivision Data

In a few cases, errors have been found in the 1991 counts for certain census subdivisions. Due to operational constraints, it was not possible to make adjustments to the 1991 Census data shown in the tables for these individual areas. Data for the following census subdivisions are known to be in error at the time of printing. For these areas, the original and revised population and dwelling counts are shown.

## Ontario

### Moore, Ontario

1991 total population reads	10,664
should read	10,873

## Other Related Products

The 1991 Census product line is designed to serve the diverse needs of our users. A wide range of products and services are available from the 1991 Census of Population. They are organized into five categories:

- (1) **Reference Products** are designed to make census products and services easier to use by helping clients identify their needs and to find and interpret the data.
- (2) **Data Products** present a wide range of census data for standard geographical areas, covering social, cultural and economic characteristics of Canadians.
- (3) **Analytical Products** provide an interpretation of the 1991 Census data covering a variety of topics or themes, and present the findings in easy-to-read publications.
- (4) **Tabulation Services** provide tabulations aimed at meeting users' needs in a more detailed or specific form than is available in standard products.
- (5) **Workshops and Seminars** are offered to inform new and current data users about census data and to assist them in maximizing the value of census data to meet their needs.

To obtain more detailed information on the products and services available from the census, refer to the 1991 Census Catalogue, Cat. No. 92-302E. As well, you may contact your nearest Regional Reference Centre listed in the "Contacts" section of this publication.

Listed below are other products with emphasis on population and dwelling counts and geographic boundaries.

### Equivalent publication from previous census.

## Regional Reference Centres

Statistics Canada's Regional Reference Centres provide a full range of census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase publications, microcomputer diskettes, microfiche, maps and more.

The staff of the Regional Reference Centres provide consultative and research services in addition to providing after-sales service and support, including seminars and workshops on the use of Statistics Canada information.

Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems CANSIM and TELICHART. A telephone inquiry service is also available with toll-free numbers for regional users outside local calling areas. Call, write, fax or visit the nearest Regional Reference Centre for more information.

## Additional References and Services

In addition to Regional Reference Centres and depository libraries, Statistics Canada publications may be ordered through your **local bookstore** or **subscription agent**. Contact the nearest Regional Reference Centre for a list of Canadian outlets available, or consult the 1991 Census Catalogue (Catalogue No. 92-302E).

Secondary distributors offer data access and analytical support through a variety of consulting and computer-based services not available at Statistics Canada. The names and addresses of licensed distributors may be obtained from any Regional Reference Centre.

Statistics Canada provides **digital geographic products** which allow computer manipulation of geographic data. A customized retrieval service is available for users who wish to define their own geographic area of study. A variety of data retrieval files and services provide flexibility in selecting a geographic base.

A complete description of available digital files and services is documented in the 1991 Census Catalogue (Catalogue No. 92-302E).

Information concerning **census of agriculture products and services** may be referenced in the 1991 Census of Agriculture Products and Services publication, Catalogue No. 92-303, or by calling toll free 1-800-465-1991.

Users with special data requirements may request **post-census survey services**. Data are made available on microcomputer diskettes for use with spreadsheet software, or on paper output. For additional information, please contact the nearest Regional Reference Centre.

The Electronic Data Dissemination Division (EDDD) is responsible for CANSIM, Statistics Canada's computerized database network and information retrieval service. Users are provided with access to current and historical statistics in various forms including specialized data manipulation and analysis packages, graphics facilities and a bibliographic search service. For more information about CANSIM, contact any Regional Reference Centre.

## Définitions

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le **Dictionnaire du recensement de 1991** (n° 92-304F au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

## Densité de la population

Nombre de personnes au kilomètre carré de superficie nette.

## Division de recensement (DR)

Terme générique qui désigne les régions géographiques établies en vertu de lois provinciales et qui constituent les régions intermédiaires entre la subdivision de recensement et la province (par exemple, divisions, comtés, districts régionaux, municipalités régionales et sept autres genres de régions géographiques formées de groupes de subdivisions de recensement).

Les lois provinciales de Terre-Neuve, du Manitoba, de la Saskatchewan et de l'Alberta ne prévoient pas la création de ces régions administratives. C'est pourquoi les divisions de recensement ont été établies par Statistique Canada en collaboration avec les provinces.

## Établissement Indien

Lieu, désigné par le ministère des Affaires indiennes et du Nord Canada (AINC) à des fins statistiques seulement, où un groupe indépendant d'au moins 10 autochtones habitent de façon plus ou moins permanente. Les établissements indiens sont généralement situés sur des terres de la Couronne soumises à l'autorité fédérale ou à celle des administrations provinciales. Contrairement aux réserves indiennes, ces terres ne sont pas réservées à l'usage exclusif d'une bande indienne.

## Genre de subdivision de recensement

Le genre correspond au statut municipal de la subdivision de recensement. Les subdivisions de recensement (SDR) sont classées en divers genres, selon les appellations adoptées par les autorités provinciales ou fédérales.

Voici la liste des abréviations des genres de subdivisions de recensement :

BOR	Borough
C	City - Cité
CM	County (municipality)
COM	Community
CT	Canton (municipalité de)
CU	Cantons unis (municipalité de)
DM	District municipality
HAM	Hamlet
ID	Improvement district
IGD	Indian government district
LGD	Local government district

LOT	Township and royalty
MD	Municipal district
NH	Northern hamlet
NV	Northern village
P	Paroisse (municipalité de)
PAR	Parish
R	Indian reserve - Réserve indienne
RM	Rural municipality
RV	Resort village
SA	Special area
SCM	Subdivision of county municipality
SD	Sans désignation (municipalité)
S-E	Indian settlement - Établissement indien
SET	Settlement
SRD	Subdivision of regional district
SUN	Subdivision of unorganized
SV	Summer village
T	Town
TP	Township
TR	Terres réservées
UNO	Unorganized - Non organisé
V	Ville
VC	Village cri
VK	Village naskapi
VL	Village
VN	Village nordique

## Logement privé

Ensemble distinct de pièces d'habitation ayant une entrée privée donnant sur l'extérieur ou sur un corridor, un vestibule ou un escalier commun à l'intérieur. L'entrée doit donner accès au logement sans que l'on ait à passer par les pièces d'habitation de quelqu'un d'autre. Le logement doit répondre aux trois conditions qui le rendent propre à l'habitation durant toute l'année :

(1) avoir une source de chauffage ou d'énergie (comme en atteste la présence d'une cheminée, de fils électriques, de tuyaux ou compteurs pour l'huile [le mazout] ou le gaz, d'une génératrice, de bois de chauffage, d'ampoules électriques, de panneaux solaires, etc.) ;

(2) avoir accès à une source d'eau potable toute l'année (comme en atteste la présence de robinets, de tuyaux d'écoulement, d'un puits, d'une pompe à eau, etc.) ;

(3) fournir un espace clos permettant de s'abriter des intempéries (comme en atteste la présence de murs d'enceinte et d'un toit ainsi que de portes et fenêtres offrant une protection contre le vent, la pluie et la neige).

Aux fins du recensement, on classe les logements privés comme logements privés ordinaires, logements marginaux et logements en construction. Les logements privés ordinaires se subdivisent en trois grandes catégories : les logements occupés (par des résidents habituels), les logements inoccupés et les logements

occupés par des résidents étrangers et/ou temporaires. Les logements marginaux et en construction sont classés comme logements occupés par des résidents habituels ou comme logements occupés par des résidents étrangers et/ou temporaires. Les logements marginaux et les logements en construction inoccupés le jour du recensement ne font pas partie du parc immobilier.

## Province

Principale division politique du Canada. Du point de vue statistique, il s'agit d'une unité de base selon laquelle les données sont totalisées et recoupées.

## Région géographique

Toute région géographique délimitée ou utilisée pour la collecte, la totalisation, l'analyse et la diffusion des données du recensement.

## Région métropolitaine de recensement (RMR)

Le concept général de région métropolitaine de recensement (RMR) s'applique à un grand noyau urbain ainsi qu'aux régions urbaines et rurales adjacentes dont le degré d'intégration économique et sociale avec ce noyau urbain est très élevé.

Une RMR est délimitée à partir d'un noyau urbanisé lorsque ce dernier compte au moins 100,000 habitants, d'après les résultats du dernier recensement. Lorsqu'une région devient une RMR, elle continue de faire partie du programme même si, ultérieurement, elle subit une baisse de population.

Les régions urbaines de plus petite taille, dont le noyau urbanisé compte au moins 10,000 habitants, sont comprises dans le programme des agglomérations de recensement (AR).

## Région urbaine (RU)

Le concept général de région urbaine (RU) s'applique à une région dont la concentration démographique est élevée.

Statistique Canada définit une région urbaine comme une région ayant atteint une concentration démographique d'au moins 1,000 habitants et dont la densité de population est d'au moins 400 habitants au kilomètre carré, d'après les résultats du recensement précédent. Tout territoire situé à l'extérieur des régions urbaines est considéré comme région rurale. Ensemble, les régions urbaines et rurales représentent toute la superficie du Canada.

Les régions urbaines séparées par des espaces libres de moins de deux kilomètres sont combinées pour former une seule région urbaine.

## Réserve Indienne

Territoire dont le titre légal de propriété appartient à Sa Majesté la Reine, qui a été réservé à l'usage et au profit d'une bande indienne et qui est assujéti aux termes de la Loi sur les Indiens.

Puisque les réserves indiennes échappent généralement à la compétence des autorités locales et sont administrées par le ministère des Affaires indiennes et du Nord Canada (AINC), elles sont considérées par Statistique Canada comme des subdivisions de recensement (SDR).

## Subdivision de recensement (SDR)

Terme générique qui désigne les municipalités (telles que définies par les lois provinciales) ou leur équivalent, par exemple les réserves indiennes, les établissements indiens et les territoires non organisés.

À Terre-Neuve, en Nouvelle-Écosse et en Colombie-Britannique, l'expression désigne également les régions géographiques créées par Statistique Canada, en collaboration avec les provinces, comme équivalents des municipalités.

## Superficie

### Brute

Surface en kilomètres carrés, y compris les nappes d'eau.

Les superficies des unités géographiques sont toutes calculées d'après les limites en vigueur le 1er janvier 1991, soit la date de référence géographique pour le recensement du Canada de 1991.

Les échelles de carte utilisées pour mesurer la superficie varient entre 1/50,000 et 1/250,000. Dans les régions urbaines à forte densité de population et les régions où la population est clairsemée, on utilise parfois de plus petites ou de plus grandes échelles.

### Nette

Surface en kilomètres carrés excluant les nappes d'eau visibles figurant sur les cartes servant à calculer la superficie.

Les superficies sont toutes calculées d'après les limites en vigueur le 1er janvier 1991, soit la date de référence géographique pour le recensement du Canada de 1991.

Les échelles de carte utilisées pour mesurer la superficie varient entre 1/50,000 et 1/250,000. Dans les régions urbaines à forte densité de population et les régions où la population est clairsemée, on utilise parfois de plus petites ou de plus grandes échelles.

## Territoire

Il s'agit de deux grandes divisions politiques du Canada, soit le Yukon et les Territoires du Nord-Ouest. Du point de vue statistique, ces territoires sont l'équivalent des provinces, c'est-à-dire une unité de base pour laquelle des données sont totalisées et recoupées.

## Qualité des données

### Généralités

Le recensement de 1991 a été une entreprise complexe et de grande envergure. Bien que l'on ait déployé des efforts considérables pour assurer le respect des normes élevées tout au cours des opérations de la collecte et du traitement, il est inévitable que les estimations résultantes soient entachées d'erreurs. Il faut que les utilisateurs des données du recensement sachent que ces erreurs existent et qu'ils aient une idée générale de ses principales composantes afin d'être en mesure de déterminer si les données produites peuvent leur être utiles et d'évaluer les risques auxquels ils s'exposent en tirant des conclusions ou en prenant des décisions à partir de ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, depuis la préparation des documents jusqu'au traitement des données, en passant par l'établissement des listes de logements et la collecte des données. Certaines erreurs, qui surviennent plus ou moins au hasard, ont tendance à s'annuler lorsque les réponses fournies par les divers répondants sont agrégées pour un groupe assez important. Dans le cas des erreurs de cette nature, l'estimation correspondante sera d'autant plus précise que le groupe visé sera grand. C'est pourquoi on conseille aux utilisateurs de faire preuve de prudence lorsqu'ils utilisent des estimations relatives à de petits groupes. Toutefois, certaines erreurs peuvent survenir de façon plus systématique et introduire un «biais» dans les estimations. Comme ce biais persiste quelle que soit la taille du groupe pour lequel les réponses sont agrégées et comme il est particulièrement difficile d'en mesurer l'importance, les erreurs systématiques posent pour la plupart des utilisateurs de données des problèmes plus graves que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants :

- les **erreurs de couverture** qui se produisent lorsqu'on oublie des logements et/ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les **erreurs dues à la non-réponse** qui surviennent lorsque l'on n'a pu obtenir de réponses d'un petit nombre de ménages et/ou de personnes en raison d'une absence prolongée ou pour toute autre raison;
- les **erreurs de réponse** qui surviennent lorsque le répondant, ou parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les **erreurs de traitement** qui peuvent se produire à diverses étapes, notamment au **codage**, lorsque les commis convertissent en codes numériques les réponses en lettres; à la **saisie des données**, lorsque les préposés à l'entrée des données transfèrent sur bandes pour ordinateur les réponses figurant au questionnaire du recensement; à l'**imputation**, lorsqu'une réponse «valide», mais pas nécessairement exacte, est insérée dans un enregistrement par l'ordinateur pour remplacer une réponse manquante ou «invalide» («valides» et «invalides» renvoient à la cohérence

de la réponse, compte tenu des autres renseignements compris dans l'enregistrement);

- les **erreurs d'échantillonnage** qui s'appliquent uniquement aux questions supplémentaires figurant dans le questionnaire complet distribué à un échantillon de un cinquième des ménages; elles résultent du fait que les réponses à ces questions, une fois pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats que l'on aurait obtenus si l'on avait posé ces questions à tous les ménages.

Les types d'erreur mentionnés plus haut ont tous une composante aléatoire et une composante systématique. Toutefois, la composante systématique de l'erreur d'échantillonnage est d'ordinaire très petite comparativement à sa composante aléatoire. Dans le cas des autres erreurs non dues à l'échantillonnage, tant la composante aléatoire que la composante systématique peuvent être importantes.

### Erreurs de couverture

Les erreurs de couverture ont une incidence directe sur la précision des chiffres du recensement, c'est-à-dire sur la taille des divers univers du recensement : la population, les familles, les ménages et les logements. Bien que des mesures aient été prises pour corriger certaines erreurs identifiées, les chiffres définitifs sont toujours entachés d'une certaine erreur découlant du fait que des personnes ou des logements ont été oubliés, englobés à tort dans le recensement ou comptés deux fois.

L'oubli de logements ou de personnes se traduit par un **sous-dénombrement**. Des logements peuvent être oubliés en raison d'une mauvaise interprétation des limites du secteur de dénombrement (SD), ou du fait qu'ils sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées parce que leur logement est oublié ou classé comme inoccupé ou quand certains membres du ménage sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Enfin, certaines personnes peuvent être oubliées parce qu'elles n'ont pas de domicile habituel et qu'elles n'ont pas passé la nuit du recensement dans un logement.

Le dénombrement à tort ou le double compte de logements ou de personnes se traduit par un **surdénombrement**. Il peut y avoir surdénombrement des logements lorsque des constructions impropres à l'habitation sont classées comme logements ou lorsque des unités d'habitation ne répondant pas à la définition du logement retenue pour les fins du recensement sont comptées séparément plutôt que d'être considérées comme faisant partie d'un logement plus grand. Il peut y avoir double compte des logements lorsqu'il existe, par exemple, une certaine ambiguïté au sujet des limites des SD. Les personnes peuvent être comptées deux fois parce que leur logement a été compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. À l'occasion, il arrive qu'une personne ne faisant pas partie de l'univers du recensement, comme un résident étranger ou une personne fictive, soit dénombrée à tort. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements

et des personnes sont donc probablement légèrement sous-estimés.

En 1991, quatre études ont été entreprises afin d'évaluer les différents aspects de l'erreur de couverture. Premièrement, on a visité de nouveau un échantillon de logements classés comme inoccupés afin de vérifier s'ils étaient réellement inoccupés le jour du recensement. Les chiffres définitifs du recensement ont ensuite été corrigés pour tenir compte des personnes ou des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon de personnes dénombrées comme résidents temporaires afin de vérifier si elles avaient ou non été dénombrées à leur domicile habituel. À partir de cet échantillon, on a établi des estimations du nombre de personnes oubliées parce qu'elles étaient temporairement absentes de leur domicile habituel, puis on a rectifié les chiffres définitifs de population en conséquence. Malgré ces rectifications, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Une troisième étude, connue sous le nom de contre-vérification des dossiers, est réalisée pour déterminer l'importance de ce sous-dénombrement résiduel, pour le Canada dans son ensemble ainsi que pour chaque province et territoire, à l'occasion du recensement de 1991. Le sous-dénombrement tend à être plus élevé pour certains segments de la population comme les jeunes adultes de sexe masculin et les personnes récemment immigrées. La quatrième étude, connue sous le nom d'étude du surdénombrement, a pour objet d'étudier les erreurs de surdénombrement. Ensemble, les résultats de la contre-vérification des dossiers et de l'étude du surdénombrement fournissent une estimation du sous-dénombrement net.

### Autres erreurs non dues à l'échantillonnage

Alors que les erreurs de couverture ont une incidence sur le nombre d'unités comprises dans les divers univers du recensement, les autres erreurs influent sur les chiffres relatifs aux caractéristiques de ces unités.

Il est parfois impossible d'obtenir une réponse complète d'un ménage, même si le logement a été classé comme étant occupé et un questionnaire a été livré. Il se peut que les membres du ménage aient été absents pendant toute la période du recensement ou, en de rares occasions, que le membre responsable du ménage ait refusé de remplir le questionnaire. Il arrive plus souvent que le questionnaire soit retourné, mais qu'il y manque des données à certaines questions ou pour certaines personnes. Des efforts considérables sont déployés afin d'obtenir une réponse la plus complète possible. Les recenseurs contrôlent les questionnaires et assurent un suivi à l'égard de toute information manquante. Le travail du recenseur est ensuite vérifié tant par un surveillant que par un technicien du contrôle qualitatif. Malgré tout, il existe toujours un petit nombre de réponses manquantes à la fin de l'étape de la collecte. Bien que les entrées manquantes soient éliminées en cours de traitement en remplaçant chaque valeur manquante par la valeur correspondante figurant dans un enregistrement «similaire», il est possible que certaines **erreurs de non-réponse** s'y glissent. Cela est particulièrement grave lorsque les personnes non répondantes diffèrent des

répondants sous certains aspects; en effet, cette procédure se traduira par l'introduction d'un **biais de non-réponse**.

Même lorsqu'une réponse est obtenue, il se peut qu'elle ne soit pas tout à fait exacte. Il est possible que le répondant ait mal interprété la question ou ait donné une réponse au jugé, surtout lorsqu'il répondait pour le compte d'un autre membre du ménage, qui était peut-être absent. Ces erreurs sont désignées sous le nom d'**erreurs de réponse**. Bien que ces erreurs surviennent d'ordinaire du fait que les répondants aient fourni des renseignements inexacts, elles peuvent aussi résulter d'erreurs commises par les recenseurs en remplissant certaines parties du questionnaire, comme le type de construction résidentielle, ou au moment du rappel effectué pour obtenir une réponse manquante.

Certaines questions du questionnaire du recensement nécessitent une réponse en lettres. Pendant le traitement, on attribue un code numérique à ces réponses. Il est possible que des **erreurs de codage** surviennent, surtout lorsque la liste de codes est longue (comme dans le cas de la langue, de l'origine ethnique, de l'industrie et de la profession) et que la réponse écrite est ambiguë, incomplète ou difficile à lire. On limite le nombre d'erreurs de codage, sans toutefois l'éliminer complètement, en vérifiant un échantillon du travail de chaque codeur et en prenant des mesures correctives au besoin. Pour la première fois en 1991, une grande partie des tâches de codage ont été automatisées afin, entre autres, de réduire le nombre d'erreurs de codage.

Une fois le codage et certaines autres tâches de traitement manuel terminés, les renseignements figurant dans les questionnaires sont introduits sur clavier dans un fichier informatique. Deux méthodes de résolution ordonnée sont utilisées pour limiter le nombre d'**erreurs à la saisie des données**. Dans un premier temps, certains contrôles (comme des vérifications d'étendue) sont effectués à mesure que les données sont entrées. Dans un second temps, on introduit de nouveau sur clavier un échantillon tiré de chaque lot de documents, puis on compare les entrées résultantes aux entrées initiales. Si le nombre d'erreurs relevées au sein des entrées initiales dépasse un seuil prédéterminé, on reprend l'introduction sur clavier des données de tout le lot de documents.

Une fois les données saisies, elles sont envoyées à Ottawa où elles sont soumises à une série de contrôles informatiques visant à relever les réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord définir ce que l'on entend par une réponse invalide. Les réponses invalides ou manquantes doivent ensuite être remplacées par des réponses valides, c'est-à-dire par des réponses qui sont compatibles avec les autres données figurant dans l'enregistrement. Dans un petit nombre de cas, il est possible de déduire la réponse correcte à partir des autres données de l'enregistrement. Toutefois, dans la majorité des cas, cela est impossible et on obtient une réponse valide à partir d'un enregistrement «donneur» prélevé au hasard parmi un groupe d'enregistrements cohérents qui sont pour un certain nombre de caractéristiques connexes similaires à celles de l'enregistrement invalide. Bien sûr, rien ne garantit que la valeur imputée sera nécessairement identique à la réponse correcte pour la personne concernée. Cependant, pour autant que les

enregistrements manquants ou invalides soient, en moyenne, similaires aux enregistrements valides, les **erreurs à l'imputation** s'annuleront plus ou moins une fois que les résultats auront été totalisés pour une région géographique ou un sous-groupe de population de taille suffisante.

Diverses études sont réalisées afin d'évaluer la qualité des réponses obtenues dans le cadre du recensement de 1991. Ainsi, on a calculé les taux de réponse et les taux de rejet au contrôle pour chaque question. Ces taux peuvent permettre de déterminer le potentiel de non-réponse et d'autres erreurs. De même, les totalisations établies à partir des données du recensement de 1991 ont été ou seront comparées avec les estimations correspondantes obtenues à partir des données des recensements précédents, des enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les registres des naissances et le cadastre municipal). Ces comparaisons peuvent permettre de cerner les problèmes de qualité éventuels ou, à tout le moins, de relever les divergences entre les sources.

Outre ces comparaisons entre données agrégées, certaines études de couplage de microdonnées sont actuellement menées afin de comparer les réponses de certains particuliers obtenues au recensement à celles d'une autre source de renseignements. Pour un certain nombre de caractéristiques «stables» (comme l'âge, le sexe, la langue maternelle, le lieu de naissance), on compare les réponses obtenues auprès d'un échantillon de personnes à l'occasion du recensement de 1991 aux réponses obtenues des mêmes personnes à l'occasion du recensement de 1986. De même, à la suite du recensement de 1991, un échantillon de personnes ont été dénombrées de nouveau surtout pour déterminer les taux de surdénombrement. En même temps, cela a permis aux intervieweurs de poser une série de questions détaillées sur la langue, l'origine ethnique et l'état matrimonial; les réponses données à ces questions seront comparées aux réponses correspondantes du recensement afin de reconnaître les erreurs de réponse et tenter de les comprendre.

## Notes spéciales

### Chiffres de population basés sur la résidence habituelle

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada, de même que ceux qui sont considérés comme des «résidents non permanents» (voir le nota au sujet de ce groupe). Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

### Réserves indiennes et établissements indiens partiellement dénombrés

Lors du recensement de 1991, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a dû être interrompu parce qu'on ne pouvait le mener à terme ou que la qualité des données recueillies a été jugée insuffisante, pour un total de 78 réserves indiennes et établissements indiens. Ces régions géographiques sont appelées les réserves indiennes et établissements indiens partiellement dénombrés.

Les données de 1991 ne sont pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (p. ex., des variations en pourcentage) entre 1986 et 1991 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Une liste des réserves et établissements indiens en cause ainsi que les chiffres de la population et des logements privés occupés des deux derniers recensements (si les données sont disponibles) a été dressée et est présentée à l'annexe 1.

Une liste des réserves indiennes et des établissements indiens partiellement dénombrés figure à l'annexe 2. On a indiqué pour chacun la province, la division de recensement et, le cas échéant, la région métropolitaine de recensement ou l'agglomération de recensement (RMR/AR).

### Résidents non permanents

Pour la première fois en 1991, le recensement de la population inclut à la fois les résidents permanents et les résidents non permanents. Les résidents non permanents comprennent les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié.

Lors des recensements antérieurs, seuls les résidents permanents du Canada étaient inclus dans le recensement (exception faite pour 1941). Les résidents non permanents étaient considérés comme des résidents étrangers et n'étaient pas dénombrés.

Présentement au Canada, les résidents non permanents forment un segment croissant de la population. Leur présence peut avoir une influence sur la demande de services gouvernementaux tels que les soins de santé, l'éducation, les programmes d'emploi et la formation linguistique. L'inclusion des résidents non permanents au recensement de 1991 facilitera aussi la comparaison avec les statistiques provinciales et territoriales (mariages, divorces, naissances et décès) qui incluent cette population. En outre, la définition du recensement permet maintenant de mieux refléter la recommandation de

l'ONU, à savoir que les résidents à long terme (personnes demeurant dans un pays pour un an ou plus) soient dénombrés.

Le total des chiffres de population, de même que ceux de toutes les variables du questionnaire recueillies auprès de toute la population, p. ex., l'âge, le sexe, la langue maternelle et l'état matrimonial, seront touchés par le changement de l'univers du recensement de 1991. Tant que les données sur l'immigration ne seront pas publiées, il ne sera pas possible de savoir exactement jusqu'à quel point les différences observées dans les chiffres obtenus sont attribuables à l'inclusion des résidents non permanents ou à d'autres facteurs. Les utilisateurs doivent faire preuve d'une très grande prudence lorsqu'ils comparent des données de 1991 avec celles de recensements antérieurs pour des régions géographiques où la concentration de résidents non permanents est importante. Celles-ci comprennent les principales régions métropolitaines de l'Ontario, du Québec et de la Colombie-Britannique.

Même si tous les efforts possibles ont été déployés pour dénombrer les résidents non permanents, des facteurs tels que les problèmes linguistiques et la réticence à remplir un formulaire du gouvernement ou de comprendre l'utilité de leur participation peuvent influencer sur le dénombrement de cette population. Les résidents non permanents ne peuvent être identifiés qu'au moyen du questionnaire complet, qui est rempli par 20 pour cent des ménages canadiens. Une estimation de la taille de ce groupe de population ne pourra être obtenue avant la publication en décembre 1992 des données du recensement relatives à l'immigration.

## Données sur les subdivisions de recensement

Dans certains cas, des erreurs ont été relevées dans les chiffres de 1991 pour certaines subdivisions de recensement. En raison de contraintes opérationnelles, il n'a pas été possible de corriger les données du recensement de 1991 figurant dans les tableaux de ces régions individuelles. Vous trouverez ci-dessous les subdivisions de recensement dans lesquelles des erreurs ont été relevées au moment de la mise sous presse. Pour ces dernières, on a indiqué les chiffres de population et des logements originaux et corrigés.

### Ontario

#### Moore, Ontario

Population totale en 1991	
chiffre original	10,664
chiffre corrigé	10,873
Nombre de logements privés occupés en 1991	
chiffre original	3,564
chiffre corrigé	3,627

#### Sarnia–Clearwater, Ontario

Population totale en 1991	
chiffre original	74,376
chiffre corrigé	74,167

Nombre de logements privés occupés en 1991

chiffre original	28,500
chiffre corrigé	28,437

### Saskatchewan

#### Macklin, Saskatchewan

Population totale en 1991	
chiffre original	1,105
chiffre corrigé	1,117

#### Eye Hill No. 382, Saskatchewan

Population totale en 1991	
chiffre original	725
chiffre corrigé	713

#### Division No. 18, Unorganized, Saskatchewan

Population totale en 1991	
chiffre original	1,411
chiffre corrigé	1,447

Nombre de logements privés occupés en 1991	
chiffre original	451
chiffre corrigé	461

#### Weyakwin, Saskatchewan

Population totale en 1991	
chiffre original	203
chiffre corrigé	167

Nombre de logements privés occupés en 1991	
chiffre original	75
chiffre corrigé	65

#### Biggar, Saskatchewan

Population totale en 1991	
chiffre original	2,322
chiffre corrigé	2,351

Nombre de logements privés occupés en 1991	
chiffre original	967
chiffre corrigé	975

#### Biggar No. 347, Saskatchewan

Population totale en 1991	
chiffre original	1,086
chiffre corrigé	1,057

Nombre de logements privés occupés en 1991	
chiffre original	298
chiffre corrigé	290

## Autres produits connexes

La gamme de produits du recensement de 1991 est conçue pour satisfaire les divers besoins de nos utilisateurs. Nous offrons une grande diversité de produits et services du recensement de la population de 1991. Ils sont divisés en cinq catégories.

- (1) Les **produits de référence** sont conçus pour faciliter l'utilisation des produits et des services; ils aident les utilisateurs à reconnaître leurs besoins, à trouver et à interpréter les données.
- (2) Les **produits de données** offrent un vaste éventail de données du recensement pour les régions géographiques normalisées sur les caractéristiques sociales, culturelles et économiques des Canadiens.
- (3) Les **produits analytiques** sont des publications qui expliquent les données du recensement de 1991 sur un grand nombre de thèmes ou de sujets, dont les résultats sont présentés dans un style facile à comprendre.
- (4) Le **service des totalisations** établit des totalisations pour les utilisateurs qui veulent des données sous une forme plus détaillée ou plus précise que ce que l'on trouve dans les publications normalisées.
- (5) On offre des **ateliers et des séminaires** aux nouveaux utilisateurs et aux utilisateurs actuels pour les informer sur les données du recensement et pour les aider à en tirer le maximum en fonction de leurs besoins.

Pour de plus amples renseignements sur les produits et services du recensement offerts, consultez le Catalogue du recensement de 1991, n° 92–302F au catalogue. Vous pouvez également contacter le centre régional de consultation le plus près indiqué à la section «Pour renseignements» de la présente publication.

Vous trouverez ci-après une liste d'autres produits qui présentent principalement des données sur la population et les logements et sur les limites géographiques.

### Publication équivalente pour le précédent recensement.

(Nota : Les publications ne sont pas toutes en vente. Il est toutefois possible de les consulter dans les centres régionaux de consultation ou dans les bibliothèques de dépôt)

## Centres régionaux de consultation

Les centres régionaux de consultation de Statistique Canada offrent une gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter les différents produits, dont les publications, disquettes de micro-ordinateurs, microfiches et cartes.

Le personnel des centres régionaux de consultation fournit des services de consultation et de recherche en plus des services et des soutiens d'après-vente, y compris des séminaires et des ateliers sur l'utilisation des données de Statistique Canada.

Chaque centre vous offre la possibilité d'extraire de l'information des systèmes de retrait de données informatisées CANSIM et Telichart de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les utilisateurs se trouvant à l'extérieur des secteurs d'appels locaux. Téléphonez, écrivez, télécopiez ou visitez le centre régional de consultation le plus près pour de plus amples renseignements.

## Autres références et services

Vous pouvez vous procurer les publications de Statistique Canada dans les centres régionaux de consultation et dans les bibliothèques de dépôt, ou vous pouvez également les commander par l'entremise de votre **librairie** ou de votre **agent d'abonnement**. Pour obtenir une liste des points de vente au Canada, communiquez avec le centre régional de consultation le plus près, ou consultez le Catalogue du recensement de 1991 (n° 92-302F au catalogue).

Les distributeurs secondaires présentent à leurs clients des possibilités d'accès aux données et un soutien aux analyses grâce à une diversité de services de consultation et de services informatisés que n'offre pas Statistique Canada. Vous pouvez obtenir les noms et adresses des distributeurs autorisés dans un centre régional de consultation.

Statistique Canada offre des **produits géographiques numériques** qui permettent la manipulation informatique des données géographiques. Un service d'extraction des données personnalisé permet aux utilisateurs de délimiter eux-mêmes, s'ils le désirent, la région géographique qu'ils veulent étudier. La gamme de fichiers d'extraction des données et de services offre une grande flexibilité dans la sélection d'une base géographique.

Vous trouverez dans le Catalogue du recensement de 1991 (n° 92-302F au catalogue), la description complète des fichiers numériques et des services.

On peut obtenir des renseignements sur **les produits et services du recensement de l'agriculture** en consultant la publication Produits et services du recensement de l'agriculture de 1991, n° 92-303 au catalogue, ou en téléphonant sans frais au 1-800-465-1991.

Les utilisateurs qui ont besoin de données spéciales peuvent demander les **services des enquêtes postcensitaires**. Les données sont présentées sur disquettes pour micro-ordinateur pouvant être utilisées avec un programme de calcul de tableaux financiers ou sur support papier. Pour de plus amples renseignements, communiquez avec le centre régional de consultation le plus près.

La Division de la diffusion informatique des données (DDID) est responsable du CANSIM qui consiste en un réseau de bases de données informatisées et un service d'extraction des données de Statistique Canada. Les utilisateurs ont accès aux statistiques actuelles et historiques de diverses façons, notamment grâce aux progiciels spécialisés de manipulation et d'analyse des données, aux ressources graphiques et au service de recherche bibliographique. Pour de plus amples renseignements sur le CANSIM, communiquez avec un centre régional de consultation.

## Notes, Footnotes and Abbreviations

### Note(s)

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- Amount too small to be expressed.
- An error exists in the 1991 counts for this census subdivision (CSD). For further information, see the "Special Notes" section.
- A Adjusted figure due to boundary change.
- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.

### Footnote(s)

- (1) Based on 1991 limits.
- (2) Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.
- (3) Includes all private dwellings occupied by usual residents as well as private dwellings occupied solely by temporary and/or foreign residents.

### Abbreviation(s)

Not applicable

## Nota, Renvois et Abréviations

### Nota

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- Nombres infimes.
- Une erreur a été relevée dans les chiffres de 1991 pour cette subdivision de recensement (SDR). Pour plus de renseignements, voir la section «Notes spéciales».
- A Chiffre ajusté à cause de changement de limite.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».

### Renvoi(s)

- (1) Selon les limites de 1991.
- (2) La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».
- (3) Comprend tous les logements privés occupés par des résidents habituels ainsi que les logements privés occupés seulement par des résidents temporaires et (ou) étrangers.

### Abréviation(s)

Sans objet

# CENSUS DIVISIONS, 1991 DIVISIONS DE RECENSEMENT, 1991

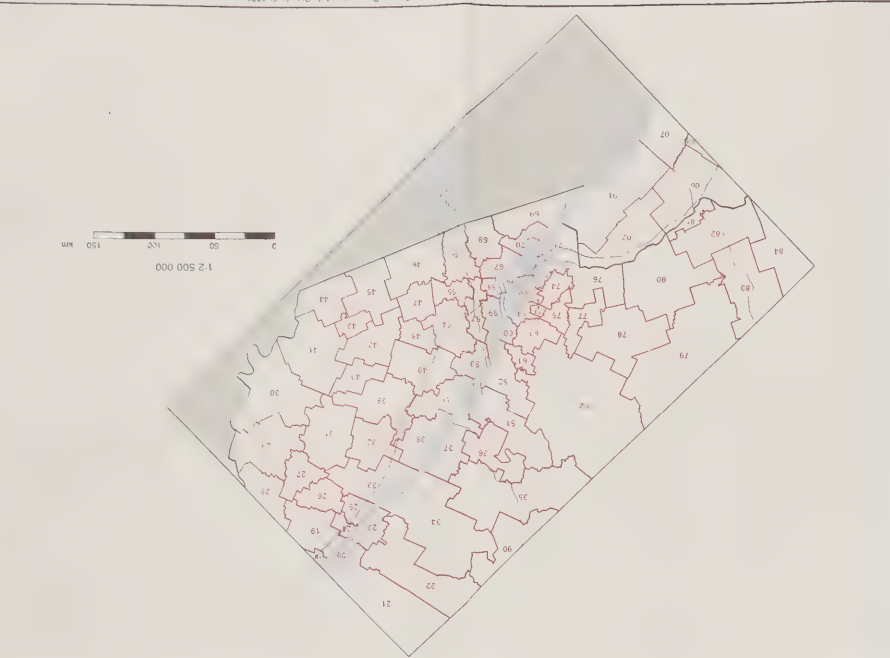

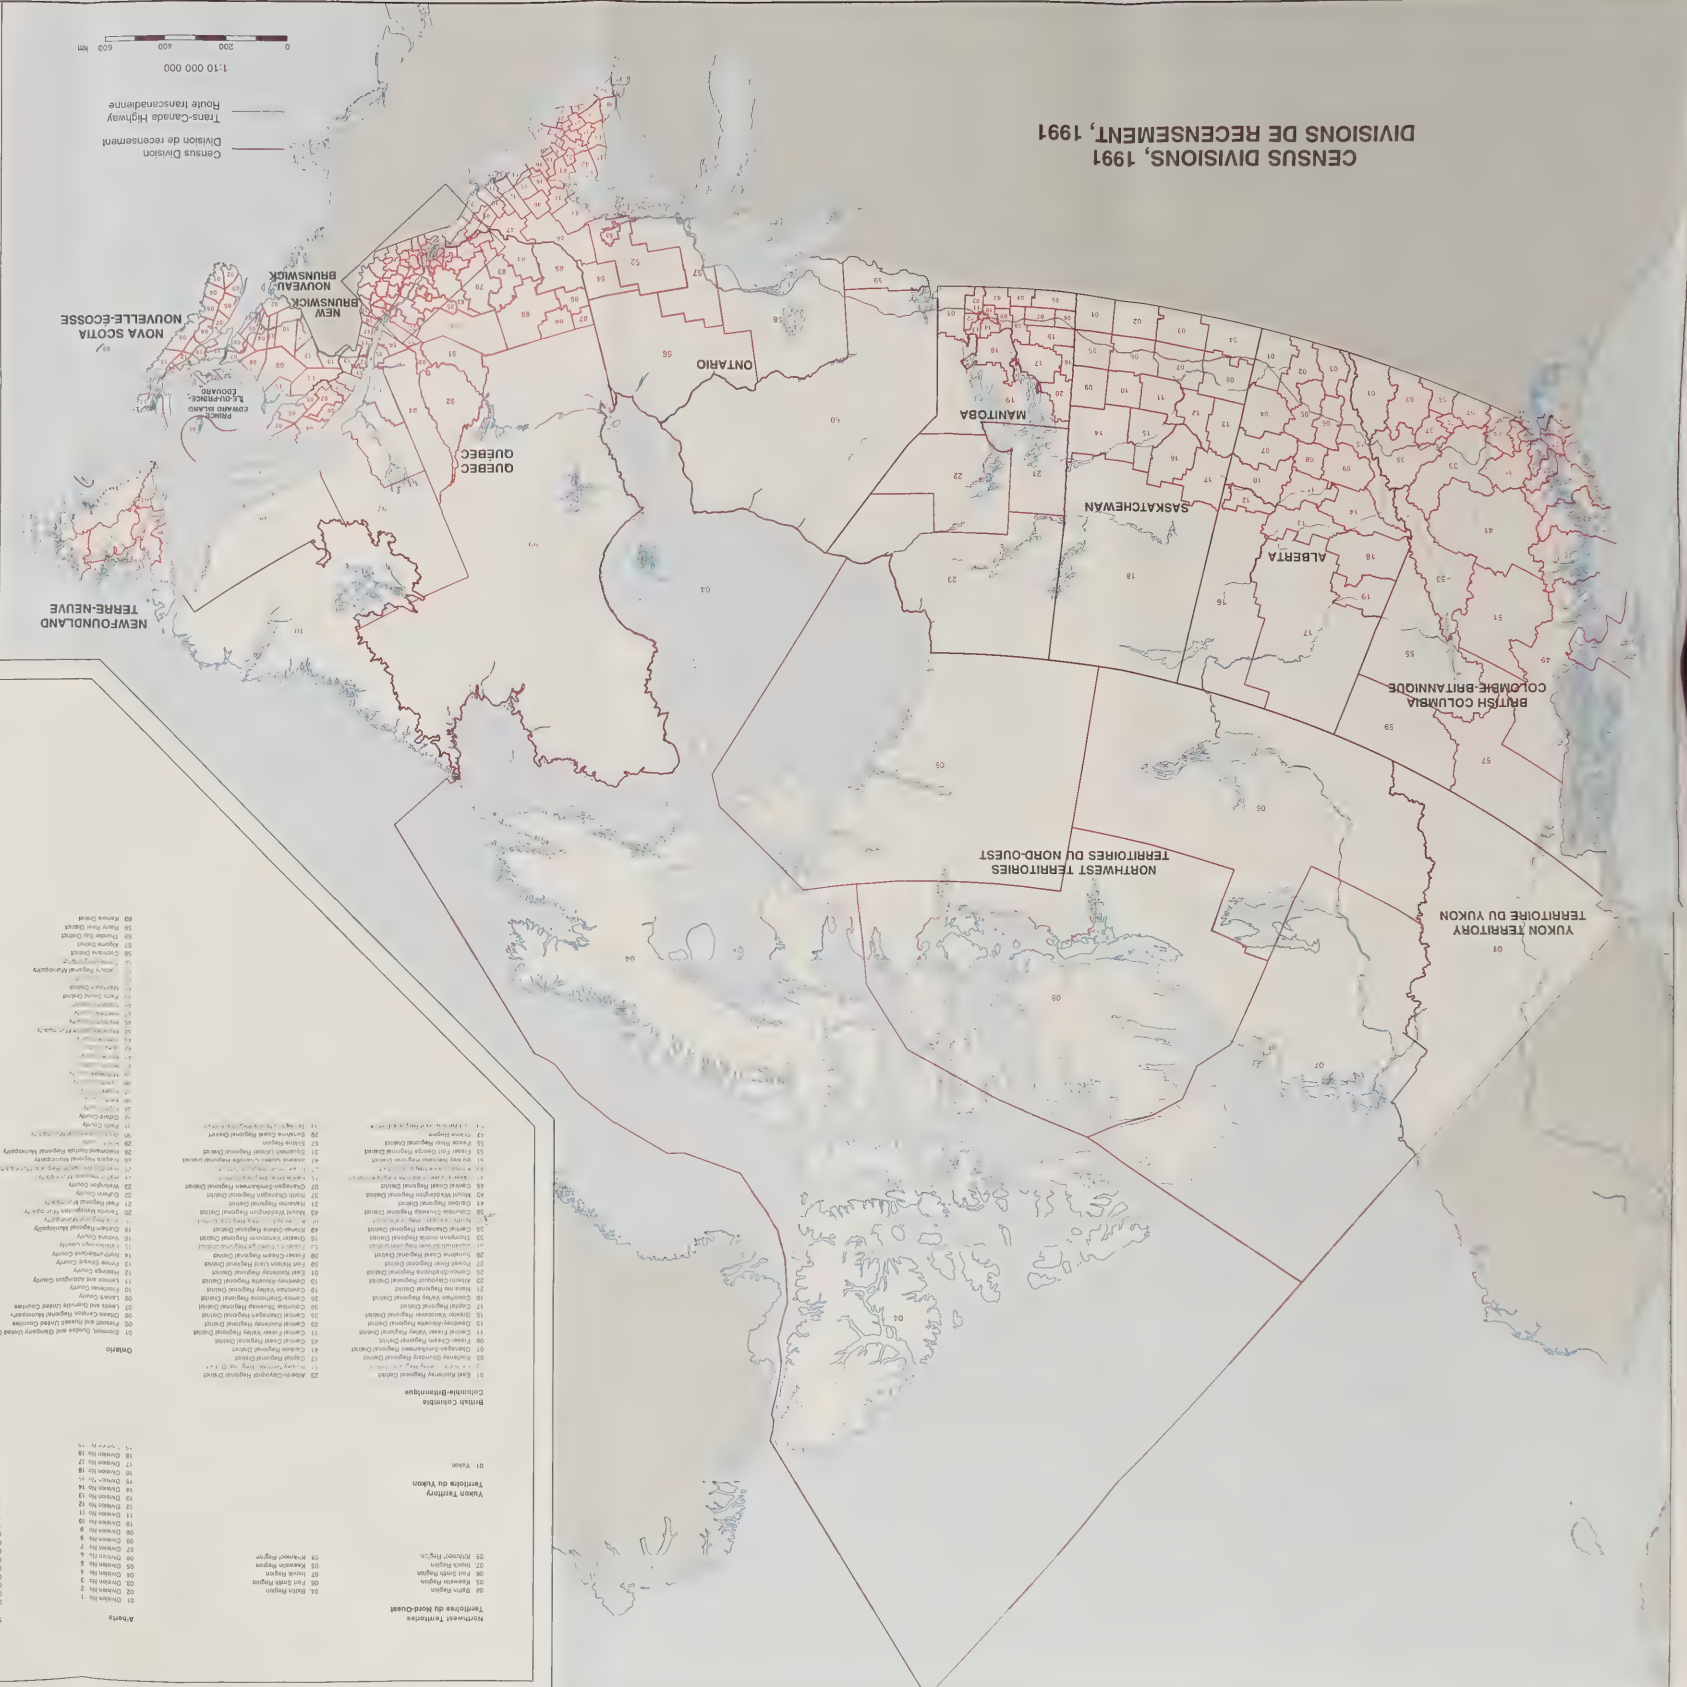

Table listing the names of the 1991 Census Divisions in French and English, along with their corresponding numbers. The table is organized by province and territory.

# JOIN THE *Celebration*

**WITH THE MOST USEFUL  
AND ATTRACTIVE  
CANADA YEAR BOOK  
EVER PUBLISHED.**

On the occasion of the nation's 125th anniversary of Confederation, the **1992 Canada Year Book** takes a unique look at the fascinating highlights in the development of Canada since 1867.

Exceptionally popular among business people, journalists, librarians, parliamentarians, educators and diplomats for 125 years, the **1992 Canada Year Book** is designed as a comprehensive reference source for the latest on economic, political, and social information on Canada and Canadians. And for the first time, this "special collector's" edition presents picturesque vignettes on Canada's past with informative, easy-to-read text.

Special features include:

- a new 22cm X 30cm (9" X 12") format
- larger typeface
- over 300 rare archival photos
- historical perspectives on Canada's past
- 22 chapters, 607 pages bound in deluxe hard cover

Time and time again, you'll reach for this compact encyclopedia to answer questions on all aspects of Canada.

- THE LAND
- THE PEOPLE
- THE NATION
- THE ECONOMY
- ARTS AND LEISURE

# PARTICIPEZ *à la fête*

**EN VOUS PROCURANT  
L'ANNUAIRE DU CANADA  
LE PLUS UTILE ET LE PLUS  
ATTRAYANT JAMAIS PUBLIÉ.**

L'Annuaire du Canada de 1992, qui marque le 125<sup>e</sup> anniversaire de la Confédération, jette un regard unique sur les grands moments de l'évolution du pays depuis 1867.

Cet ouvrage, particulièrement populaire depuis 125 ans auprès des gens d'affaires, des journalistes, des bibliothécaires, des parlementaires, des enseignants et des diplomates, est conçu comme un ouvrage de référence où l'on retrouve les données économiques, politiques et sociales les plus récentes sur le Canada et les Canadiens. Cette édition spéciale présente, pour la première fois, de pittoresques illustrations se rapportant à l'histoire du Canada de même que des textes informatifs et faciles à lire.

Au nombre des caractéristiques spéciales, on compte :

- un nouveau mode de présentation :  
22cm x 30 cm (9" x 12")
- des caractères plus gros
- plus de 300 photos d'archives rares
- des perspectives historiques sur le passé du Canada
- 22 chapitres, 607 pages reliées par une couverture rigide de luxe.

Cette encyclopédie compacte est un ouvrage indispensable pour répondre à vos questions portant sur tous les aspects du Canada.

- LE TERRITOIRE
- LA POPULATION
- LA NATION
- L'ÉCONOMIE
- LES ARTS ET LES LOISIRS

Available in separate English and French editions, the Canada Year Book (Cat. No. 11-402E) sells for \$49.95 (plus \$5.05 shipping and handling) in Canada, US \$60 in the United States, and US\$70 in other countries (includes shipping and handling).

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster ordering, using your VISA or MasterCard, call toll-free 1-800-267-6677 or fax your order to (613) 951-1584. Please do not send confirmation.

Vous pouvez vous procurer l'Annuaire du Canada (no 11-402F au Catalogue), en version française ou anglaise, pour 49,95 \$ (plus 5,05 \$ pour frais d'expédition et de manutention) au Canada, 60 \$ (devises américaines) aux États-Unis et 70 \$ (devises américaines) dans les autres pays (frais d'expédition et de manutention compris).

Pour commander, prière d'écrire au Service des Ventes des publications de Statistique Canada, Ottawa (Ontario) K1A 0T6, ou de communiquer avec le Centre régional de consultation de Statistique Canada le plus près de chez vous (voir la liste qui figure dans la publication).

Pour accélérer les commandes, utilisez votre carte VISA ou MasterCard ou composez sans frais le 1-800-267-6677 (téléphone) ou le (613) 951-1584 (télécopieur). Veuillez ne pas envoyer de confirmation.
